006 克努特哈姆森博物馆
Knut Hamsun Center

受到哈姆森作品的启发, Steven Hall建筑事务所设计了一个“空小提琴盒”造型的楼层, 阳台的设计看起来仿佛“女孩儿挽起袖子正在擦拭黄色的窗户”。
Inspired by passages of Hamsun's texts, there is an "empty violin case" deck, while a viewing balcony is like the "girl with sleeves rolled up polishing yellow panes".

020 城市海洋科学博物馆
Cit  de l'Oc an et du Surf

建筑的造型由立体概念“苍穹下/深海中”演化而来, 内凹的“苍穹下”构建了主要的外部广场, “海洋广场”望向蓝天和大海, 遥望远方的天际线, 凸起的天花板结构构筑起了“深海中”的展示空间。
The building form derives from the spatial concept "under the sky" / "under the sea". A concave "under the sky" shape forms the character of the main exterior plaza, the "Place de l'Oc an", which is open to the sky and sea, with the horizon in the distance. A convex structural ceiling forms the "under the sea" exhibition spaces.

030 8字形大楼
8 House

8字形大楼的中心被一分为二, 形成两个不同的空间, 大楼的中心主要是500平方米的公用设施。
The bow-shaped building creates two distinct spaces, separated by the center of the bow which hosts the communal facilities of 500 m².

044 盖茨电脑科技中心和希尔曼未来发电技术中心
Gates Center for Computer Science and Hillman Center for Future Generation Technologies

对于项目最好的诠释是: 一个能凸显卡内基梅隆大学和计算机科学学院在世界学术殿堂中的显著地位的建筑。
An architecture that represents Carnegie Mellon University's and the School of Computer Science's exceptional status among the world's leading academic institutions is best informed from within the project's own situation.

052 古根海姆博物馆的莱特饭店
The Wright at the Guggenheim Museum

雕塑的形态营造出了外翻的天花板, 浪状的墙壁变成了舒适的座椅, 弧形酒吧和公共餐桌使空间更具动感, 玩味的造型使游客获得多样的体验。
The sculptural forms create a flared ceiling. The undulating walls become comfortable seating. The arched bar and communal table animates the space. The playfulness of these forms offers a dynamic experience for visitors.

058 费耶特维尔2030: 交通之城
Fayetteville 2030: Transit City Scenario

2030交通之城方案是一个富足项目, 因为在这个方案下, 每家每户的交通成本将降到年收入的16%。
The 2030 Transit City Scenario plan is a prosperity-building program since the average household in rail transit cities spent 16% of its annual income on transportation.

072 Grangegorman总体规划
Grangegorman Master Plan

该设计将为校园提供世界一流的创新型便利设施, 并通过现代手法将传统的学院建筑风格进行完美诠释。
The design offers world-class, innovative facilities for both DIT and HSE, enhancing their identity and image by employing a contemporary interpretation of traditional collegiate quads.

080 金属盾包裹的房子
Shield House

该项目将一个高高的, 弯曲细长的流通空间与矩形的居住空间并置。
This urban infill project juxtaposes a tall, slender curved circulation space against a rectangular living space.

Cheung Residence | 张氏别墅

基地平面图
Site plan

该住宅的设计灵感来源于一枚中国的古代铜钱。外表面是圆形格子变色玻璃气窗，提供了遮阳的同时也反射了周围的自然环境，也暴露了内部沿中心庭院向上攀升的混凝土结构。天井和倒影池将光线带入内部，并且使得整个住宅对流通风。西南面的另一个垂直镂空既可作为私家花园，又是通向内部的缓冲区。

Interior perspective—living room—southwest

Inspiration for the design of this house was drawn from the form of an ancient Chinese coin. A circular lattice of photochromic glass louvers forms the exterior shell, providing solar shading and reflecting the natural context. It veils the concrete structure within, which ascends in section around the central courtyard. The courtyard and reflecting pool bring light into the interior and allow cross-ventilation throughout the house. A second vertical void, located in the southwest sector, doubles as private garden and environmental buffer to the main living area.
